

JHEEL BHANDIA

Cyber Security Analyst | SOC Analyst | VAPT Specialist

Pune, Maharashtra | +91-9579455054 | jheelbhandia@gmail.com | [linkedin.com/in/jheel-bhandia-4ba319298](https://www.linkedin.com/in/jheel-bhandia-4ba319298) | github.com/Jheelbhandia05 | jheelbhandia05.github.io

PROFESSIONAL SUMMARY

Cyber Security Analyst with 12 months of professional experience in VAPT, SOC operations, Incident Response, and Web Application Security — including 6 months as a Cyber Security Analyst at Gigante Technologies and 6 months of OJT at First Quadrant Lab. Proficient in Splunk SIEM, Burp Suite, Metasploit, Nessus, OWASP ZAP, Wireshark, and Docker. Skilled in threat detection, TTP analysis, SIEM log monitoring, event correlation, Cyber Threat Intelligence (CTI), vulnerability management, patch management, and container security. Certified in Cyber Security and Ethical Hacking (2025) and Deloitte CyberJob Simulation (2026). Seeking a Cyber Security Analyst, SOC Analyst, or VAPT role in a high-impact security team.

TECHNICAL SKILLS

Security Domains: VAPT, Web Application Security, Network Security, SOC Analysis, Threat Detection and Intelligence, Incident Response, Vulnerability Management, Patch Management, Risk Assessment, SIEM Log Monitoring, Cyber Threat Intelligence (CTI), Zero-Day Vulnerability Research, Wireless Security, Container Security, Endpoint Security, Reconnaissance, Social Engineering

Security Tools: Burp Suite, Nmap, Metasploit Framework, Nessus, Wireshark, OWASP ZAP, SQLmap, Hydra, Nikto, Aircrack-ng, Ettercap, Trivy, Docker

Frameworks and Standards: OWASP Top 10, NIST CSF, MITRE ATT&CK, ISO 27001 (Awareness), CVE/CVSS Analysis, IDS/IPS, Cyber Kill Chain, PTES, ARP Poisoning Detection, Container Hardening, TCP/IP, OSI Model

SIEM and Monitoring: Splunk SIEM, Log Analysis, Alert Triage, Event Correlation, SIEM Rule Tuning, Endpoint Detection, Security Event Monitoring, SOAR Concepts

Threat Detection and Response: Threat Intelligence, Threat Hunting, TTP Analysis, Incident Response Playbook, EDR/XDR Concepts, Vulnerability Lifecycle Management, Remediation Planning

Web Application Security: OWASP Top 10, SQL Injection, XSS, IDOR, CSRF, API Security Testing

Cloud and Container Security: Docker, Container Security (Trivy), Basic Cloud Security (AWS/Azure), Identity and Access Management (IAM), Active Directory Fundamentals, Zero Trust

OS and Programming: Kali Linux, Ubuntu, Windows Server | Python, Bash, PowerShell, C, C++, HTML, CSS, MySQL

Tools and Version Control: Git, GitHub, Visual Studio Code

PROFESSIONAL EXPERIENCE

Cyber Security Analyst — VAPT

Nov 2025 – May 2026

Gigante Technologies | Full Time | Pune, Maharashtra

- Conducted VAPT engagements for web applications and internal networks, identifying 30+ vulnerabilities across multiple assessments using Nmap, Burp Suite, Nessus, OWASP ZAP, Nikto, and SQLmap.
- Performed network reconnaissance, port scanning, service enumeration, ARP poisoning detection, and Cyber Threat Intelligence (CTI) gathering; exploited vulnerabilities using Metasploit to validate risk exposure.
- Executed TTP analysis aligned with MITRE ATT&CK; applied patch management and vulnerability lifecycle management practices to drive remediation prioritization.
- Delivered penetration testing reports with CVE/CVSS references, proof-of-concept screenshots, and remediation guidance — reducing open critical findings by 80% (from 15 issues to 3).
- Conducted wireless security assessments using Aircrack-ng and Ettercap; performed container security reviews using Trivy and applied Docker container hardening best practices.

Cyber Security Trainee — SOC and Incident Response (OJT)

Nov 2025 – May 2026

First Quadrant Lab Pvt Ltd | On-the-Job Training | Pune, Maharashtra | Remote

- Conducted Red Team and Blue Team exercises covering threat detection, alert triage, event correlation, and incident response playbook execution using Splunk SIEM, aligned with NIST CSF.

- Performed web application penetration testing on 5+ targets using Burp Suite and OWASP ZAP, identifying OWASP Top 10 vulnerabilities including SQL Injection, XSS, and IDOR; documented findings with CVSS scores and CVE references.
- Triaged 100+ security alerts per week using Wireshark and Splunk; applied SIEM rule tuning, TTP analysis against MITRE ATT&CK, and endpoint detection to escalate high-severity events accurately.
- Executed reconnaissance, scanning, and exploitation phases using Nmap, Metasploit, and Nikto to simulate zero-day vulnerability research scenarios in a controlled lab environment.
- Delivered structured VAPT and incident response reports with risk ratings, patch management recommendations, and mitigation steps for both technical and non-technical stakeholders.

PROJECTS

Automated Website Vulnerability Scanning Tool | Python, Nmap, Nikto, OWASP ZAP

- Built a Python-based automation tool integrating Nmap, Nikto, and OWASP ZAP to scan web applications for open ports, outdated services, and common CVEs; reduced manual scanning time by 60%.
- Generated structured vulnerability reports with CVSS severity ratings and patch management recommendations, supporting the full vulnerability lifecycle from detection to closure.

SIEM Log Monitoring Dashboard | Splunk, MITRE ATT&CK, Event Correlation

- Configured Splunk to ingest and analyze 500+ system and network log events; implemented SIEM rule tuning and event correlation to detect brute-force attacks, failed logins, and anomalous traffic.
- Created correlation rules aligned with MITRE ATT&CK TTP techniques for endpoint detection and threat hunting, improving detection accuracy and reducing false positives across monitored assets.

Phishing Email Detection System | Python, NLP, Cyber Threat Intelligence

- Developed a Python-based tool to analyze email headers and content for phishing and social engineering indicators — spoofed domains, suspicious links, and malicious patterns — using CTI heuristics.
- Achieved 85% detection accuracy on test datasets comprising phishing and legitimate email samples.

Secure Remote Access and Container Security Solution | VPN, SSH, Docker, Trivy, IAM

- Designed a secure remote access setup using VPN, SSH hardening, and firewall rules enforcing Zero Trust and IDS/IPS principles; applied Docker container hardening and Trivy vulnerability scanning.
- Applied encryption standards, IAM principles, and patch management controls aligned with ISO 27001 and NIST CSF for data protection and access control compliance.

EDUCATION

Bachelor of Computer Applications (BCA) — First Class	2025
--	------

Krishna College of Commerce and Science, Wathar | Score: 75.45%

Advanced Certificate Course — Cyber Security and Ethical Hacking	2025
---	------

Boston Institute of Analytics, Pune

Higher Secondary Certificate (HSC)	2022
---	------

SGM College, Karad | Score: 72.52%

CERTIFICATIONS

- Certification in Cyber Security and Ethical Hacking — Boston Institute of Analytics (2025)
- CyberJob Simulation — Cyber Security Analyst — Deloitte via Forage (2026)
- Certification in C and C++ Programming — Kunal Computers (2023)
